

Steel Flange PP Encapsulated PN16

The Steel Flange PP Encapsulated Drilled to PN16 by **PRIME** is engineered to the latest and highest standards, offering a reliable and durable connection solution for water supply, irrigation, and firefighting networks. Featuring a high-quality steel base encapsulated in polypropylene (PP) for enhanced corrosion resistance, it ensures long-term performance and protection in demanding environments. Drilled to PN16 standards, this flange guarantees a secure, leak-proof fit for efficient and reliable pipeline installations.

Drilled to PN16
